

Project Manager (m/f/d)

We're a Hamburg, Germany-based start-up with the mission to democratize cancer diagnostics. We apply cutting-edge artificial intelligence to support pathologists in diagnosing cancer quicker and more accurately. Our AI solutions are the world's most widely used AI-based digital pathology tools and were the first AI to be used in clinical routine diagnostics in the USA and EU and +10.000 patients have been diagnosed with the help of our AI. We have been voted as one of the top 10 German startups of 2020 by the German Entrepreneurship Price Committee.

We solve one of the most pressing challenges in modern healthcare: Demand for complex medical image analysis is increasing rapidly, but the number of cancer experts remains stagnant. We build clinical support tools for visual diagnosis using state-of-the-art deep learning. Our tools help cancer experts deliver faster and more reproducible diagnoses and so that the experts can focus on areas where their human expertise is indispensable. Optimizing cancer diagnostics with machine learning is challenging and requires the brightest minds. At Mindpeak, you will work closely with a highly experienced team of industry experts in deep learning, pathology and entrepreneurship in an inspiring and motivating environment.

As a Project Manager, you are accountable for the success of our internal and external projects. You are the central interface for all team members, customers and external collaborators.

Together with you we make a difference in the world and shape the future of cancer diagnostics!

Your tasks:

- Manage hands-on our challenging cutting-edge biopharma and clinical projects while maintaining quality, timelines and budgets
- Design and develop scopes and objectives of our projects
- Communicate project goals, milestones and project plans with all internal and external stakeholders to keep everyone informed throughout the project lifecycle
- Develop and manage detailed project schedules and working plans, including project updates, adjustments and progress tracking, using agile methods
- Manage our project portfolio
- Establish, implement and coordinate a regulatory compliant project management system that meets the requirements of a vibrant start-up company
- Create and maintain project plans for the approvals of our software medical devices according to regulatory requirements in the EU and USA (CE, FDA)
